The flagship product of Göbel High End sets the ultimate benchmark for loudspeakers.

The “Carbon Excellence Aeon” bending wave driver based on the patented bending wave technology by Göbel® is the core of our flagship Epoque Aeon Fine.

This “Carbon Excellence Aeon” bending wave driver is based on the principals of sound creation through musical instruments and is the result of over 15 years of development that we invested in order to achieve the most natural sound possible.

In order to also achieve an absolute homogeneous sound dispersion and stimulation of the room modes within the low frequency range the Epoque Aeon Fine is additionally equipped with 6 custom built Göbel® Aeon 7 inch long throw aluminum bass drivers.

These bass drivers are specifically located on the front and the back and are impulse compensated to create an absolute smooth transition off the “Carbon Excellence Aeon” bending wave driver’s broad frequency range to the low frequencies of the custom built bass drivers.

The purely functional design with the perfectly defined form and the use of specific aluminum alloys together with our special high density, bulletproof, multilayered composite materials eliminate any diffractions, resonances and energy saving effects.

Göbel High End, the most advanced loudspeaker technology, completely designed and manufactured in Germany.
Technical specifications

Principle: Bending wave loudspeaker with impulse compensating passive radiators

Drivers: Patented Göbel® Carbon Excellence Aeon bending wave driver
2 massive Göbel® Aeon aluminum longthrow bass drivers 7 inch (18 cm)
4 massive Göbel® Aeon aluminum longthrow passive radiators 7 inch (18 cm)

Housing: Acoustically optimized bulletproof multilayered composite materials, massive aluminum acoustic baffles
top element completely made of massive aluminum

Standard finishes:  
- Real piano lacquer white with aluminum parts lacquer anodized in natural silver semi gloss
- Real piano lacquer black with aluminum parts lacquer anodized in dark space grey semi gloss

Impedance: 4 Ohm (Impedance minimum in Single-Wiring: 2,8 ohm at 160 Hz)

Efficiency: 85 dB / 1 W / 1m

Crossover frequency: 160 Hz

Frequency response: 28 Hz - 31.000 Hz

Dispersion range: 180° frontside: 28 Hz - 31.000 Hz rearside: 28 Hz - 4.000 Hz

Dimensions: Total height: 125 (H) cm, Base: 43,6 (W) x 55,7 (D) cm

Weight: 105 kg without packaging
